Spencer Goss

Louisville, KY | (502) 836-5593 | spencer.goss@outlook.com | linkedin.com/in/spencergoss1234 | github.com/SpencerGoss | oddsix.app

SUMMARY

M.S. Business Analytics (AI concentration), completed August 2026, and B.B.A. Finance & Marketing with a Business Analytics minor. A year verifying expenditure data in SAP and JD Edwards across more than ten properties. Builds and runs a live multi-sport prediction platform alone, from database through daily pipeline to reporting, and designs multi-agent AI workflows with independent verification. Works daily in SQL, Python, Excel and Power BI.

EDUCATION

M.S. Business Analytics, AI Concentration Aug 2025 to Aug 2026
University of Louisville · Louisville, KY · 3.94 GPA

B.B.A. Finance & Marketing, Minor in Business Analytics Aug 2020 to Mar 2024
University of Kentucky · Lexington, KY · 3.61 GPA · Dean's List

PROJECTS

Oddsix | Multi-Sport ML Prediction Platform oddsix.app

- Built and run a live multi-sport platform covering the NBA, NFL, MLB, NHL and soccer, with 25+ years of historical plus current data updating through the day and pages for about 57,000 players.
- Engineered a prediction model for each sport, validated on seasons it never trained on, with calibrated win probabilities graded publicly after every game; a new model generation is in live testing this season.
- Own the full stack solo, from data ingestion and SQL to the Astro front end on Cloudflare. Python (pandas, scikit-learn, LightGBM), SQL, thousands of automated tests.

Agentic AI Workflows | Agent Design, Prompt Engineering, and Measured Outcomesgithub.com/SpencerGoss/agent-engineering

- Build and run multi-agent workflows end to end: independent reviewer agents check each other's output, adversarial framing is isolated so agreement cannot pass for correctness, and model selection is matched to the task. Claude in daily use.
- Every recommendation is logged against whether it changed an outcome: vague suggestions changed something about 4% of the time, concrete ones almost always. Published the reusable prompt patterns so the approach is repeatable by someone else.

EXPERIENCE

Accounts Payable Specialist Aug 2024 to Jul 2025
Churchill Downs Incorporated · Louisville, KY

- Verified invoice data daily in SAP and JD Edwards across 10+ properties, checking amounts, vendor codes, and account classifications against source documentation and correcting errors before they reached reporting.
- Created accounts payable procedures and onboarding documentation and trained new hires on the system workflows; supported an automated invoice-processing rollout by validating the data behind it.

Warehouse Associate May 2020 to Aug 2023
Terex Corporation · Louisville, KY

- Shipping and receiving for a global heavy-equipment manufacturer; coordinated with drivers and sales teams to resolve order and delivery issues and trained new hires.

SKILLS

Data & Analytics SQL (SQL Server, PostgreSQL), Python (pandas, scikit-learn, LightGBM, XGBoost), R, statistical and predictive modeling, ETL, data-quality checks, SHAP explainability

BI & Reporting Power BI, Tableau, Plotly, Excel (pivot tables, XLOOKUP, VLOOKUP), dashboards, KPI and trend reporting

AI & Automation Multi-agent workflow design, prompt engineering, Claude in daily use, Microsoft Copilot (built an invoice-triage agent in coursework)

Systems & Business SAP, JD Edwards, Git, Azure (coursework), invoice and vendor data validation, process and onboarding documentation
